

MARCH 2020

## BULL & FEMALE PRODUCTION SALE

**MARCH 21, 2020 • SALE BEGINS AT 1:00 PM (EST)**  
————— AT THE RANCH IN BISCOE, NC —————

**HIGH QUALITY GELBVIEH • ANGUS • BALANCER® CATTLE**

# *Welcome To Our 2020 Spring Sale*

We have assembled a nice set of cattle for your appraisal. The bulls are a stout, rugged set with EPDs and pedigrees that can work across the breed. You'll find several out cross bulls to most herds that I'm sure are destined to find their way to the top of the gene pool.

Several bred and open heifers from the heart of our program are in the offering.

We appreciate your continued support and are truly thankful for the relationships we have built throughout this industry.

We pray God's blessing during this coming Easter season for you and your family!

Sincerely,

*Duane and Wendy Strider*

..... Your source for Performance,  
Carcass and Eye Appeal

## **SCHEDULE OF EVENTS**

**Friday, March 20**

Cattle available for viewing  
2:00 PM until dark

**Saturday, March 21**

Cattle available for viewing 8:00 AM

**11:30 AM**

Lunch Served

**1:00 PM**

Production Sale begins  
Load out begins at conclusion of sale

## **VIDEO VIEWING ONLINE**

Approximately 10 days prior to the sale,  
the videos of all animals will be available  
for viewing at [www.ccrosscattle.com](http://www.ccrosscattle.com)

## **DIRECTIONS TO SALE FACILITY**

C-Cross Cattle Co. and JBOB Farm  
signs at T-intersection of  
OLD 220 and Auman Rd.

Farm entrance is just across the  
interstate overpass.

Map located on the back cover  
of catalog.

**GPS Address:**

**205 J-Bob Lane, Biscoe, NC 27209**

**SALE DAY PHONES**

Sale Facility 910-428-4568  
Duane Strider, mobile 336-964-6277  
Todd Barlow 502-548-4671

**AUCTIONEER**

## SALE PROCEDURES & SALE BOOK INFORMATION

### C-CROSS CATTLE CO VIDEO AUCTION PROCEDURE:

All females and bulls selling will be penned beside the sale barn for viewing on Friday, March 20 and Saturday, March 21. The cattle will be sold with viewing of the animal selling on video screens in the sale barn. No animal will come into the ring. Please arrive early for viewing of all sale animals.

### FEMALES SELLING:

All female lots sell individually unless stated otherwise from the block.

### BULLS SELLING:

All bull lots sell individually.

## ABOUT THE BULLS

### C-CROSS CATTLE COMPANY BULL GUARANTEE:

All bulls have been tested and passed a Breeding Soundness Examination. Bulls will be guaranteed for their first breeding season defined as a 90 day breeding season post turn in or a maximum of four months after date of purchase. Guaranteed in full unless negligence of the buyer. C-Cross Cattle Company will work to furnish you another bull of equal value or refund purchase price of the original bull less salvage value.

### C-CROSS BULL BOARDING AND DEVELOPMENT:

Any bull sold in this sale can be left at a cost of \$3.50 per day. Buyer must buy insurance or assume risk. All bulls must be picked up before May 1, 2020 unless other arrangements are made.

### BULL DEVELOPMENT:

All bulls were developed on a wet ration of soy hulls, corn gluten, corn silage and a mineral vitamin pack. Bulls had access to grass and/or hay and were held in large pastures for adequate exercise. Bulls have been developed, not fattened. We add pounds slowly to minimize any problems with soundness. We don't creep feed calves at the side of dams. We believe that our environment should be the same as that of most commercial producers. This allows us to see what the cow, calf and grass can achieve.

### HEIFER BULLS:

Look for this symbol  to help in selecting a bull to use on first calf heifers.

If you see this symbol  beside a lot number, you will know that C-Cross believes it is a "Heifer Bull."

### PERFORMANCE INFORMATION:

**BW** = Actual Birth Weight

**AYW** = Adjusted Yearling Weight

**AWW** = Adjusted Weaning Weight

**200 Day Act. WW** = 200 Day Actual Weaning Weight

**SC** = Actual Scrotal Circumference

***C-CROSS CATTLE COMPANY WILL RETAIN 50% SEMEN INTEREST IN ALL BULLS SELLING UNLESS OTHER ARRANGEMENTS ARE MADE PRIOR TO THE FALL OF THE GAVEL.***

## ABOUT THE FEMALES

### FEMALE PREGNANCY AND CALF INFORMATION:

All females selling as bred have been confirmed bred by a licensed veterinarian.

### EPDs (Expected Progeny Differences):

All EPDs, for bulls and females, are current as provided by the American Gelbvieh Association at the time of catalog printing. EPDs are subject to change before the transfer of registration and/or the buyers receipt of the transferred registration papers due to updated data recorded at the AGA.

# SALE BOOK INFORMATION AND DATA

## How the New Genetic Evaluation Impacts Genetic Selection

The AGA is a part of International Genetic Solutions (IGS), which is a collaboration between other North American beef breed associations. IGS invested in the new BOLT software, which brings with it the single-step genetic evaluation, a new, more streamlined method for incorporating genomic results into expected progeny differences (EPDs).

This partnership benefits the commercial beef industry by providing EPDs backed by millions of pedigree, performance, and genomic records, which are directly comparable across the partner breeds. Hands down, BOLT technology provides the best and most accurate method for genetic prediction. Below is a sampling of improvements brought on by BOLT:

Progeny equivalent values in the table below describe the number of progeny with reported data for each trait that would be needed to match the amount accuracy provided by a genomic test. For example, the progeny equivalent for calving ease direct (CED) for Gelbvieh and Balancer® registered animals is 15, which means that the inclusion of a genomic test is the equivalent to having calved 15 heifers bred to a particular bull.

### ADVANTAGES TO THE BUYER WITH GE EPDs:

- Make better bull buying decisions
- DNA testing is not affected by environment
- Greater confidence in your seedstock supplier
- Select replacement heifers and potential donor dams with more confidence
- Get EPDs with ACC values equal to or greater than a lifetime of progeny
- Find maternally focused bulls that will produce superior replacement females
- Select superior young sires that will accelerate genetic improvement
- More accurately select sires that excel in feedlot and carcass traits, especially marbling.

## EPD DESCRIPTIONS IN THE SALE BOOK:

**CED:** Calving ease direct, percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease. This EPD can be vital to a rancher looking to decrease the amount of calves pulled in his herd.

**BW:** Birth weight, predicts the difference, in pounds, for birth weight of the calf.

**WW:** Weaning weight, predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

**YW:** Yearling weight, predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

**MK:** Milk, the genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

**TM:** Total maternal, an index that combines growth and milk information as a prediction of the weaning weight performance of calves from a sire's daughters.

As an index, this value is not reported with an accompanying accuracy. A greater TM value means a mother that returns comparatively higher weaning weights on her calves.

**CEM:** Calving ease maternal, represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease. This EPD is important to a rancher's bottom line because it predicts which animals produce daughters with a genetic pre-disposition to calve unassisted as heifers.

**YG:** Yield grade, differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

**CW:** Carcass weight, differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

**REA:** Ribeye area, differences in ribeye area in inches between the 12th and 13th rib. Greater ribeye areas are preferable.

**MB:** Marbling, predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

**FPI:** Feeder profit index, an economic selection index designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold on grade and yield. Well ranking sires for FPI have higher marbling and carcass weight than their contemporaries. As a terminal index, little emphasis is put on maternal traits such as stayability and calving ease.

**\$COW:** Represents the genetic value in dollars of profit of an animal when retained as a replacement female relative to other animals in the herd. A higher number represents more profitable genetics for maternal productivity. \$Cow will serve producers in selecting bulls that will sire daughters with stayability and reproductive efficiency as well as other traits that lead to profitability in a production system, such as milk, calving ease, moderate mature weight and the ability of calves to gain. A female's genetics also influence the performance of her calves in the feedlot and at slaughter, so traits such as feed efficiency and carcass value are also included in \$Cow.
